7	Entertainment	OTT (Prime Video Sub.)	50	Yearly subscription Rs. 600
8	Food	Meals	500	
9	Miscellaneous	Stationery	50	
10	Learning	Books	100	
Total			5450	
Budget			7000	

## Answers to Questions:

- Total monthly expenses = Rs. 5450 Total budget = Rs. 7000 Percentage expense =  $(\text{Total monthly expenses} / \text{Total budget}) \times 100 = (5450 / 7000) \times 100 = 77.86\%$  Therefore, the total percent expense for the month is 77.86%.
- The maximum expense category is Housing with a total expense of Rs. 3500 (Rs. 3000 for rent and Rs. 500 for utilities), and the minimum expense category is Miscellaneous with an expense of Rs. 50.
- Housing expenses are Rs. 3500, and the total income (budget) is Rs. 7000. Percentage of income spent on housing =  $(\text{Housing expenses} / \text{Total income}) \times 100 = (3500 / 7000) \times 100 = 50\%$  Therefore, 50% of the income is spent on housing.
- Calculate 10% of the monthly income and Deduct the calculated amount from the income and save the remainder.
